

## Seminar 9

1. Study the limits of the following functions when  $(x, y) \rightarrow (0, 0)$ :

(a)  $\frac{x^2 - y^2}{x^2 + y^2}$ .      (b)  $\frac{x + y}{x^2 + y^2}$       (c)  $\frac{x^3 + y^3}{x^2 + y^2}$ .      (d)  $\frac{\sin x - \sin y}{x - y}$ .

2. Compute the partial derivatives (and specify where they exist) for the following functions:

(a)  $f(x, y) = e^{-(x^2+y^2)}$ .      (c)  $f(x, y) = \|(x, y)\| = \sqrt{x^2 + y^2}$ .  
(b)  $f(x, y) = \cos x \cos y - \sin x \sin y$ .      (d)  $f(x, y, z) = x^2 yz + ye^z$ .

3. Let  $f : \mathbb{R}^2 \rightarrow \mathbb{R}, f(x, y) = xy$ . Using the definition, prove that  $Df(x_0, y_0) = (y_0, x_0)$ .

4. Prove that

$$f(x, y) = \begin{cases} \frac{xy}{\sqrt{x^2 + y^2}}, & (x, y) \neq (0, 0) \\ 0, & (x, y) = (0, 0). \end{cases}$$

is continuous and has partial derivatives, but it is not differentiable in the origin.

5. Find the gradient of the function  $f$  at the point  $a$  for the following:

(a)  $f(x, y) = e^{-x} \sin(x + 2y), a = (0, \frac{\pi}{4})$ .      (c)  $f(x, y, z) = e^{xyz}, a = (0, 0, 0)$ .  
(b)  $f(x, y) = \arctan(\frac{y}{x}), a = (1, 1)$ .      (d)  $f(x, y, z) = \sqrt{x^2 + y^2 + z^2}, a = (1, 1, 1)$
